

3 Prestart

Getting factories back to work: Plans and processes backed by global experience

Planning

Detailed evaluation of production and how industrial services underpin the ability to restart, including:

- Planning and re-design of production processes with focus on social distancing guidelines.
- Planning and modification of material delivery and Inhouse Supply Chain Management.
- Planning and modification of people flow and delivery timing.
- Mid- and long-term contingency planning.

Preparation

Communications

PPE

Security

Wellbeing

Building infrastructure maintenance

Cleaning and hygiene

Preparation is key to ensure optimum performance. Our support services include:

- Workshop including process analytics, task based specification and redesign.
- Re-prioritised activities focused on production to support ramp up in recognition that it is not business as usual.
- Interim solutions that represent best value during recovery to maximise resources and cost containment.
- A detailed roadmap that tracks progress towards the new normal.

Performance

Digital recording of facilities

3D-print

Drone Inspections

Predictive Maintenance by IoT sensor technology

Use of small robots in Facilities Management

Human Machine Interaction (HMI)

Leadec helps customers reach the highest levels of performance with a range of optimisation services that include:

- Phased ramp up sensitive to each operation and its timeline for recovery.
- Intensive resourcing immediately in advance of reoccupation to ensure viability of production and its infrastructure.
- Scenario testing undertaken prior to occupation.
- Reevaluate the performance metrics and service levels to measure the new norm by facility and sub-production.

We love your factory
